TruthBounty IMO Video Script

Duration: 2 minutes **Speakers:** Timilehin Faruq (Founder) & Mujeeb (Frontend/Design Engineer)

PART 1: FOUNDER - Timilehin Faruq

Duration: 85-90 seconds

[0:00 - 0:12] INTRO & HOOK

"If you've ever traded on Polymarket, built up a winning streak, then moved to PancakeSwap Prediction - you know the frustration. Your entire track record? Gone. You start from zero. No one knows you're a skilled trader.

I'm Timilehin Faruq, founder of TruthBounty."

[0:12 - 0:30] THE PROBLEM

"Prediction markets are exploding. Polymarket did over a billion dollars in volume during the US elections alone. But there's a fundamental problem nobody's solving:

Reputation doesn't travel. Every platform is an island. A trader who's profitable on Overtime Markets is a complete stranger on Azuro. There's no way to verify skill, no way to build trust across the ecosystem."

[0:30 - 0:50] THE SOLUTION

"TruthBounty is the first cross-platform reputation protocol for prediction markets.

We aggregate your trading performance across 6 major platforms - Polymarket, PancakeSwap Prediction, Limitless Exchange, Overtime Markets, Azuro Protocol, and SX Bet - into a single, verifiable score we call the TruthScore.

Think of it like a credit score, but for prediction accuracy. One number that proves your track record, portable across the entire ecosystem."

[0:50 - 1:05] THE SECRET SAUCE - WILSON SCORE

"Here's what makes TruthBounty different from simple win-rate calculations: we use Wilson Score confidence intervals.

A trader with 90% accuracy on just 10 bets will score LOWER than someone with 67% accuracy on 1,200 bets. Because sample size matters. Our algorithm mathematically separates genuine skill from luck."

[1:05 - 1:18] WHAT WE'VE BUILT

"For this hackathon, we've shipped a fully functional MVP.

Live leaderboards pulling real trading data from all 6 platforms. A copy trading system where you can follow top-ranked traders with one click. Simulated position tracking so you can paper trade alongside the best.

All deployed and running on BNB Chain today."

[1:18 - 1:35] IMO STRUCTURE & THOUGHTS ON THE MODEL

"Our Initial Milestones Offering is structured across 5 phases over 7 months. We're raising $500,000 to take TruthBounty from MVP to full mainnet - including Soulbound NFTs and DAO governance.

What I love about the IMO model is the accountability it creates. Funds are tied to deliverables. Investors aren't just trusting a whitepaper - they're funding proven progress at each stage. It aligns incentives in a way traditional raises don't. For builders, it's the right way to fundraise."

PART 2: MUJEEB - Vibe Coding

Duration: 30-35 seconds

[1:35 - 1:47] LEAD WITH CREDIBILITY

"I'm Mujeeb, frontend and design engineer on TruthBounty.

Let me talk about how we built this. We're integrating 6 different blockchain APIs - The Graph subgraphs, REST endpoints, real-time WebSocket infrastructure. We implemented Wilson Score confidence intervals from the statistical literature. This is genuinely complex engineering."

[1:47 - 1:57] THE VIBE CODING JOURNEY

"But here's our edge: we vibe-coded this. Claude, Cursor, AI-augmented development throughout.

My personal journey with it? Honestly, it changed how I think about building. I used to spend days stuck on implementation details. Now I spend that time on architecture and design decisions - the stuff that actually matters. AI handles the heavy lifting. It's not a shortcut, it's a better way to work."

[1:57 - 2:07] THE INSIGHT

"We architected the system. We made the technical decisions. AI helped us write production code at 3x speed. Every line reviewed, every integration tested.

This is what vibe coding looks like when done right. TruthBounty is proof that small teams with the right tools can compete with anyone. Thanks for watching."

PRODUCTION NOTES

Element	Detail
Timilehin B-roll	Live platform demo: leaderboard, trader profiles, copy trading UI, TruthScore calculations
Mujeeb B-roll	Code editor, terminal, Claude/Cursor in action, architecture diagrams
Pacing	Timilehin ~130-140 wpm; Mujeeb ~140-150 wpm
Tone	Timilehin = visionary, authoritative; Mujeeb = technical, confident
End card	TruthBounty logo + truthbounty.xyz

COVERAGE CHECKLIST (Omar's Requirements)

Requirement	Covered	Where in Script
How vibe-coded your project is	Yes	"we vibe-coded this. Claude, Cursor, AI-augmented development throughout"

Journey with vibe coding (how it's been, usefulness)	Yes	"It changed how I think about building... I used to spend days stuck on implementation details"
Thoughts on the IMO model	Yes	"What I love about the IMO model is the accountability it creates. Funds are tied to deliverables"
Milestones agreed on / structure	Yes	"5 phases over 7 months... $500,000... Soulbound NFTs and DAO governance"

Prepared for Seedify Prediction Markets Hackathon TruthBounty - The First Cross-Platform Reputation Protocol for Prediction Markets
